

HY:GUARD

network services

Security of Information Technology is one of the greatest concerns companies face in today's complex environment. Companies are now looking for ways to **minimize downtime** created by the escalating number of modern day threats such as **viruses, spyware, intrusions, and inappropriate Internet usage**. This requires a comprehensive security infrastructure. Implementing Firewalls at the perimeter of your network is no longer enough to protect your corporate assets. Most organizations do not have the necessary resources or onsite expertise to employ and maintain a **comprehensive security infrastructure** that guards against unforeseen security gaps.

HyGuard is uniquely leveraged with the right technology and skill sets to eliminate these gaps. Through the use of our **NetiSafe Managed Appliance** you and your staff will have the opportunity to focus on core business activities while we **monitor and control employee Internet usage, and network threats**. NetiSafe was designed from the ground up as a flexible **tiered service structure**, allowing you to choose the most appropriate level of protection based on your current technologies, current organizational goals and future strategic direction.

NetiSafe Managed Service

Internet Content Filter

Monitor and control employee Internet usage to ensure employees are not abusing their Internet privileges.

Traffic Control & IDS

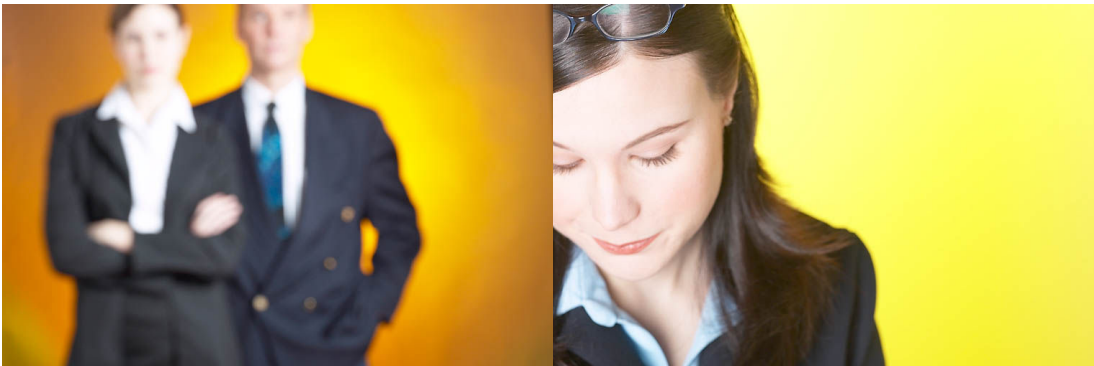

Monitor, control, and report on all bandwidth, application and user activity. Eliminate vulnerabilities while you prioritize important traffic.

Firewall & VPN

Defend against external unauthorized access while ensuring internal network usage is optimized. Our Network Operations Center is configured to monitor your network 24 hours a day, 7 days a week.

Anti-Virus/Spam/Spyware

Block access to spy-ware and spam sites, while you prevent employees from downloading files containing viruses, and becoming distracted with the abundance of inappropriate pop-up ads.

- Customized Managed Security Solution for your organization. Tiered service structure allows you to choose the most appropriate level of protection for your business.
- Reduce security risks and threats, while increasing productivity and mitigating legal liabilities that may result from Internet misuse.
- We take care of all of your network security needs so that you can focus on your core business activities and optimize your business efficiency.
- 24x7 real-time monitoring, reporting, and response to network threats.
- Low monthly costs, thereby eliminating expensive upfront capital expenditures.
- Eliminate the risk of purchasing a product that is not suitable for your organization. HyGuard's monthly service allows you to "test" the product for any length of time without any obligation to buy.
- NetiSafe Managed Service comes with unlimited technology upgrades, therefore you do not have to purchase up-dated equipment in order to stay abreast modern day security threats.

Increase Productivity

- Employees spend an average of 5.9 hours/week surfing non-work related websites
- 50% of workers spend at least 30 minutes/day surfing non-work related websites

**Save over
\$100/Month/Employee!**

Decrease Legal Liabilities

- 37% of at-work Internet users have viewed pornography from work
- 23% of men who use the Internet at work view pornography while at work

Increase Network Security

- Spyware costs a company with 100 employees \$15,000 - \$20,000 per year in maintenance and lost productivity
- North American firms are more worried about viruses, worms, hackers and phishing attacks than **any** other security threats

Increase Network Efficiency

- 18% of employees watch or listen to streaming media at work
- 72% of at-work Internet users utilize high bandwidth applications such as P2P; diverting bandwidth from core business activities
